

# How to attract Women Along with Synthetic Pheromones

**P**heromones in humans are chemical substances which are let go of through sweat from the body as a hint of **sexual attraction**. Though these pheromones are made in the body but in today's age and time man has had the opportunity to make these types of pheromones artificially as well. There have been many trials and studies to check when these kinds of artificial pheromones go a long way just like naturally occurring pheromones and their reports have revealed that these manufactured pheromones have actually got a very high rate of success in getting the opposite sex. In this article we are going to explore more about these pheromones and how to use them effectively.

## Different Forms of Pheromones

There are basically two types of pheromones produced by a **human body**. One produced by the male body is called **androstenone** and the other the one that is created in a woman's body is called copulin. They are basically both chemical substances which happen in the body and also act as messengers of lovemaking attraction. The more the body generates these chemicals higher the chances of getting a potential partner. This kind of recent scientific development make people genuinely interested in putting on artificial pheromones.

## Artificial Pheromones

Man made artificial pheromones usually have the same basic formulation as well as the difference lies in the quality of elements used. It is very important to make use of cologne that has a high percentage of pheromones inside it. These kinds of **pheromones** are not really cheap so you need to check up the merchandise high quality as well as standing completely before going ahead with the purchase.
