

Pheromones And Increased Attractiveness

Who would have thought that the reason why some men and women attract other women and men more than the rest had something to do with certain chemicals called **pheromones** that our body releases. These chemicals are something that all of us release through our own skin and the larger the amount we release the more **sexually attractive** we appear. The reason being once we release the pheromones they travel undetected through the nose of our 'could be' companion and trigger in their mind a subconscious feeling that translates into increased sexual responses.

This Determines How Attractive You are to Your 'Could be' Partner

Your clothes, cologne and also looks maybe important but they are secondary when compared to these chemicals. This is what explains those off days and nights when nothing seems to be going right and those other days when you seem to hit a bit of a lean patch. It all has to do with the amount of this chemical you're releasing through your skin.

What It Means for You

Science is very capable of working like miracles, and since that time the function of these **human pheromones** came to light, the obvious question sprang up. Can humans control them? Well, the answer is yes. If your body is not releasing a sufficient amount of these chemicals, you will want to put some of them on. As a result, the advent of the **pheromone cologne** came to be, or the **pheromone perfume** in the case of women.
