

Scents That Attracts

How does the opposite-sex attract you? Is it their eyes? Their smile? Their body? The way they walk? The way they stand? Is it their buttocks? Is their muscle? Is it their boobs? Or can it be because of their smell? Believe it or not, many researchers have pointed out that attraction to the opposite-sex is mainly as a result of their particular smell.

Several managed research suggested that attraction to the opposite-sex isn't only because of physical destination, but mostly because of our own olfactory senses. According to many scientists, human beings are also known to be able to secrete **pheromones** which usually is similar to what animals largely use.

“ *What are pheromones? In the animal kingdom, pheromone functions as a kind of a social response. Typically in liquid form, animals and insects leave secretions of these chemicals as a way to give information to other animals or perhaps insects of the same species.*

These secretions or perhaps pheromones functions in order to inform a pet or insect of the same species if the secreting individual is ready for mating or as a territorial sign. In humans, pheromones are mainly known as a form of attraction.

- Few well-controlled scientific studies have have you been published suggesting the possibility of pheromones in humans.
- According to many these types of researchers, pheromones in humans mostly works as a trigger for a chemical reaction to it's receiver.

Popular circumstance of pheromone use involves the McClintock effect, in which women pheromones are usually said to bring about a unique reaction in other women, such as their menstrual cycles.

“

A Brief Explanation of How To Buy Pheromones Humans only respond to the pheromones from other humans. The precise result of human pheromones is not known, but studies have proven they are effective. The fragrances should produce chemical reactions in the body that will attract others. There...

Pheromones in the market However, pheromones in humans are mostly known in the market as a form of attraction. Products such as **nexus pheromones** are used as a way for humans to attract the opposite-sex, such as males attracting the females and vice versa.

However, based on many experts studying the effects of nexus pheromones, the effect of this sort of pheromone is not only used to attract a potential mate, such as that in the animal kingdom, but also gives a competitive edge for many people.

Using these kinds of pheromones, other than the nexus pheromones, to attract the opposite-sex can also work in situations in which standing-out coming from among competition is important, such as in a job interview.

Work interviews, skills and experience is not the factor that allows an applicant in order to land in a position. According to suppliers of these kinds of goods, an individual making use of specialized **pheromone colognes** can increase a human's attraction to its interviewer, allowing the interviewer to view this candidate differently from others.
